

## **ReForge — Autonomous Repository Migration, Powered by IBM Bob**

### **The Problem**

Legacy code migrations are slow, repetitive, and risky. Engineers manually rewrite frameworks file by file, hoping nothing breaks — and often something quietly does: a changed API route, a silent schema shift, a broken test no one noticed until production.

### **The Business Value**

ReForge turns weeks of manual migration to work into a fast, automated, evidence-backed process. It saves engineering time, reduces the risk of costly production breakages, and produces a full audit trail proving exactly what changed — so teams can modernize legacy systems with speed *and* confidence, not one at the cost of the other.
